

Flooding and your power supply

We all know electricity and water don't mix. Follow this guide so you and your family avoid danger.

Before a flood

- Turn off and unplug any appliances that may become immersed in water.
- Move portable appliances upstairs if you can.
- Fill in the helpful contacts page so you have it ready to use if the worst happens.

During a flood

- If water is about to enter your property, turn off your electricity supply using your isolator switch or fuse box – but only if it is safe to do so. If you are unsure, contact your insurer or an electrician for advice. If you don't have an isolator switch, contact your electricity supplier (the company that sends you an electricity bill) and they will be able to advise you on what to do.
- Don't assume the electricity in a flooded property is off. There is a risk that anyone who touches wet electrical appliances, switches or cables could be electrocuted.
- Don't touch any electrical appliances, cables or equipment if you are standing in flood water or if they are sitting in water.

After a flood

- If our main fuse or your meter has been under water, please keep away from the equipment. Call our emergency number to arrange a safety visit.
- Before you return to your home, call our emergency number to arrange a safety visit so we can check our main fuse and your meter.
- Make sure your internal wiring and appliances are checked by a qualified electrician before you turn anything back on.
- If you still have no electricity after an electrician has checked everything, and your fuses and trip switch are in the on position, please call our emergency number.
- Your electricity supplier is responsible for your meter, but if it is faulty we will deal with it for you.
- Don't run a generator indoors as the exhaust fumes can kill.
- If you need to leave your property, turn off your main electricity switch if it is safe to do so. In case we need to enter your property, please let us know how and where we can contact you.

Flooding and your power supply

Typical set up

Your fuse box and trip switch are usually close to your meter. Electricity meters may be inside your property or inside a meter cabinet on an outside wall. The picture below shows a meter in a meter cabinet.
